

A-A Auto Mart Car Sale

Technology Stack & Frameworks Used

MERN Stack Web Application

Frontend + Backend + Database

Purpose of this page

This front page summarizes the frameworks, libraries, database, and development tools used in the project. The following pages contain the full project overview, module UI screenshots, feature descriptions, and contribution details.

Frontend

React

Component-based UI for dashboards, forms, profiles, and customer pages.

Vite

Fast development server and optimized production build.

React Router

Client-side navigation across all user and manager modules.

Axios

HTTP communication with backend REST APIs.

Material UI, React Icons

Reusable visual components, icons, and form controls.

Framer Motion

UI animation support for a richer user experience.

Recharts, jsPDF, html2canvas

Charts and report/download generation.

Backend

Node.js

JavaScript runtime for the API server.

Express

REST API routing and middleware handling.

Mongoose

MongoDB schemas, validation, and data access.

Multer

Image and payment slip uploads.

JSON Web Token

Authentication token support for protected actions.

Sentiment

Basic sentiment analysis for review text.

dotenv, CORS

Environment configuration and frontend API access.

Database & Project Management

MongoDB Atlas / MongoDB

Primary database for users, vehicles, orders, payments, reviews, tickets, and employee records.

Git & GitHub

Version control, final branch integration, and team contribution history.

npm

Dependency management and project scripts.

Environment Variables

MONGO_URI, PORT, and JWT_SECRET are kept outside Git in local .env files.

Security Cleanup

Secrets, node_modules, uploads, and build output are excluded from repository tracking.

Documentation note: The PDF continues with the original UI screenshots and module explanations without modifying those pages.

A-A Auto Mart

Web Application Screenshots & Module Overview

A-A Auto Mart - Vehicle Sales & Management Web Application

A group web application for vehicle dealership operations, including user management, vehicle inventory, vehicle parts, mechanic work, employee salary, leave requests, payment/order handling, support tickets, reviews, and PDF/report features.

Module Contributions

Member	Main Responsibility
Anuradha Dolamulla	Employee management side: employee manager dashboard, leave management, salary management, salary records, add/update salary, leave request flows, final branch integration, Git cleanup, security cleanup, and documentation.
Supuni Kavinda	User management side: login, sign up, user manager dashboard, add user form, and profile management.
Dasmi Nayanama	Vehicle parts and mechanic side: parts inventory, part requests, mechanic dashboard, vehicle work submission, update work, and mechanic work reports.
Pramudi Pabasha	Manager, order, and payment side: order/cart flow, payment submission, payment manager dashboard, and payment transaction handling.
Dulanjali	Support and review management side: customer support tickets, ticket management, reviews, ratings, and review analytics.

Key Features

Customer login/signup, user profile management, role-based dashboards, vehicle listing and filtering, add/update/delete vehicle records, vehicle parts management, part request handling, mechanic work tracking, employee salary management, leave request workflow, cart/order flow, payment slip handling, payment manager dashboard, support ticket management, review/rating management, and PDF/report downloads.

Screenshots included: 33 UI screens from user, employee, vehicle, parts, mechanic, payment, support, and review modules.
